

Day 1 Lab Assignments

1- Design your home page (Or your CV page) using the following layout (and make sure that it's completely responsive):

- Make your page fully responsive (use viewport meta tag).
- DON'T use tables in your layout, use divs & spans (or new HTML 5 structural elements), with CSS instead.
- Use flexbox instead of floating.
- Make your images, Video responsive (Try use max-width property).

2- Use Media query and CSS breakpoints your website layout on normal laptops and PCs, tablets and smart phones:

- a. Hide the right column on tablet size (and make the middle part fill the width), and hide both right and left on smart phones. (Use media queries on CSS file and breakpoints).
- b. When you hide the right or the left columns, make them appear as rows (width 100%) above the footer (show each one below the content when you hide it).
- c. Hide the navigation bar (or change its style to be vertical), in width less than 450px (Use media query on CSS style, not CSS file).
